Huawei E160 USB Modem – User Guide

INSTALLING YOUR USB MODEM

It is very easy to install your new Huawei E160 USB Modem. Please follow the instructions below.

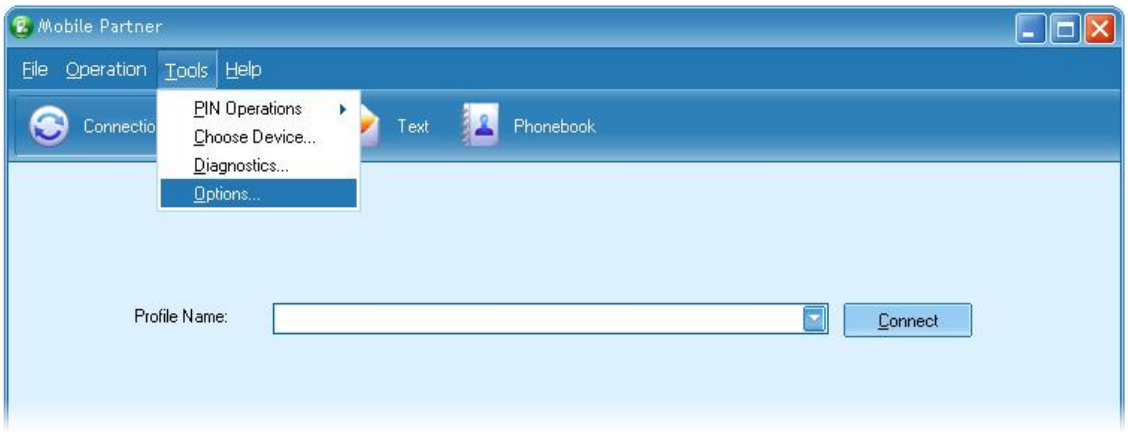
1. Plug your USB modem into an available USB port on your computer / laptop
2. Follow the on screen instructions to install your modem
3. When prompted, reboot your computer / laptop

CONNECTING TO THE INTERNET

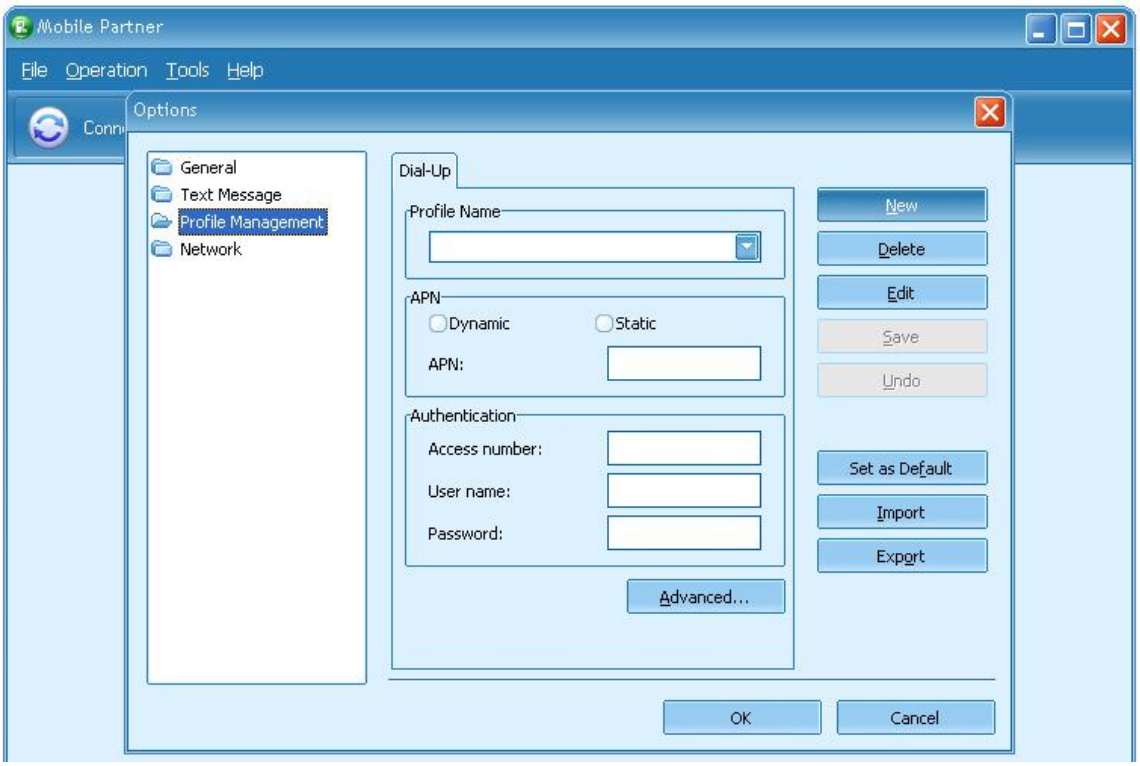
To connect to the internet using your new Huawei E160 USB Modem, please follow the instructions below.

1. Locate the "**Mobile Partner**" icon on your Desktop

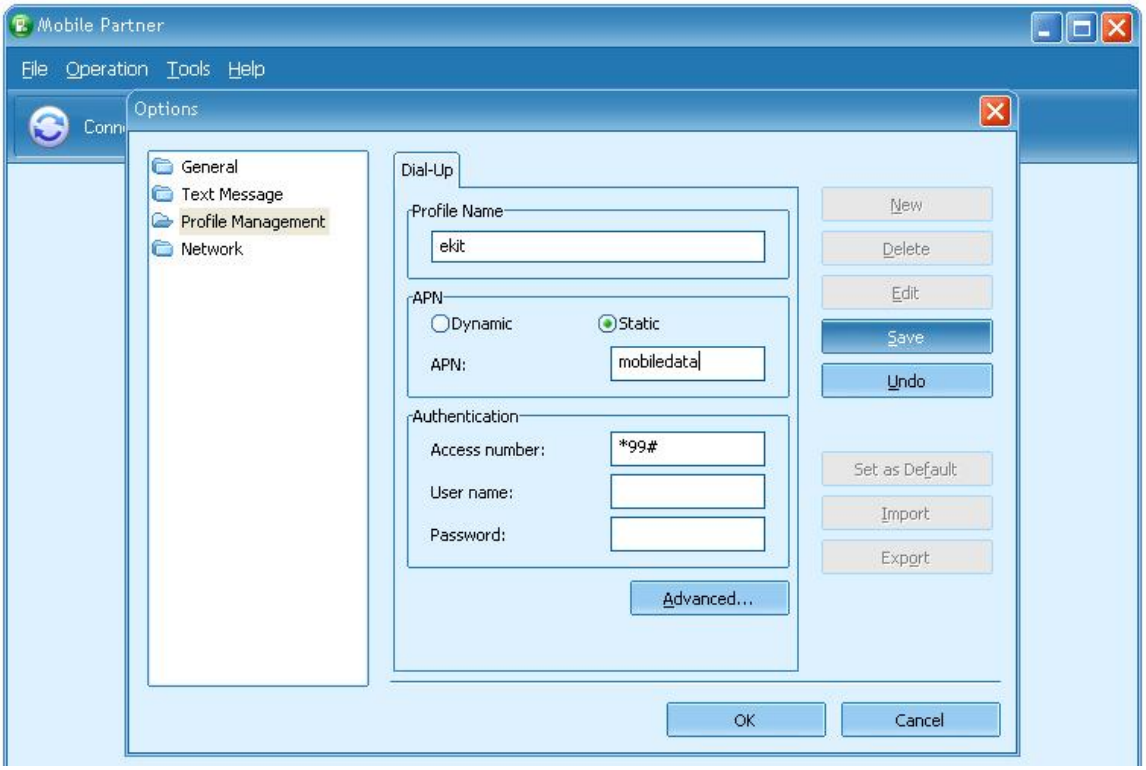
2. Double-click on the icon to open the Mobile Partner software
3. Locate the **Tools – Options…** menu



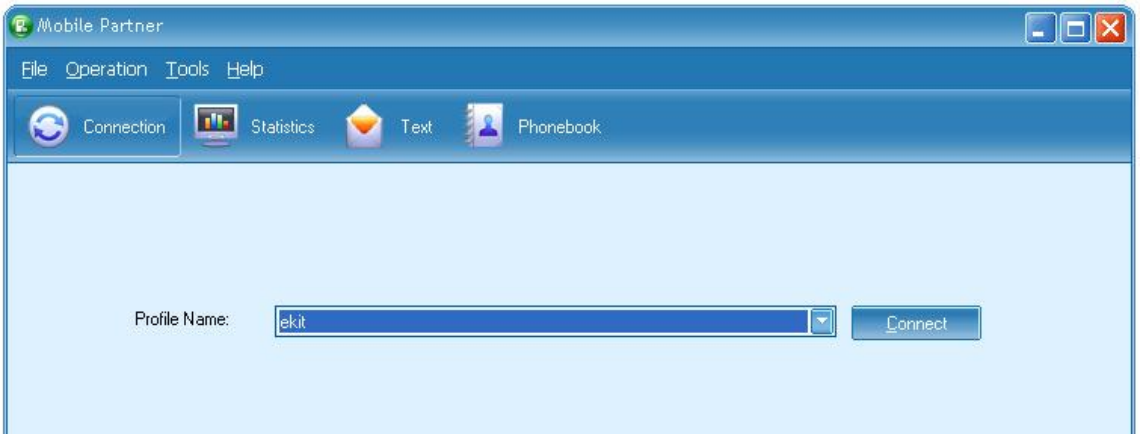
4. In the Options window, click on **Profile Management** and then on **New**



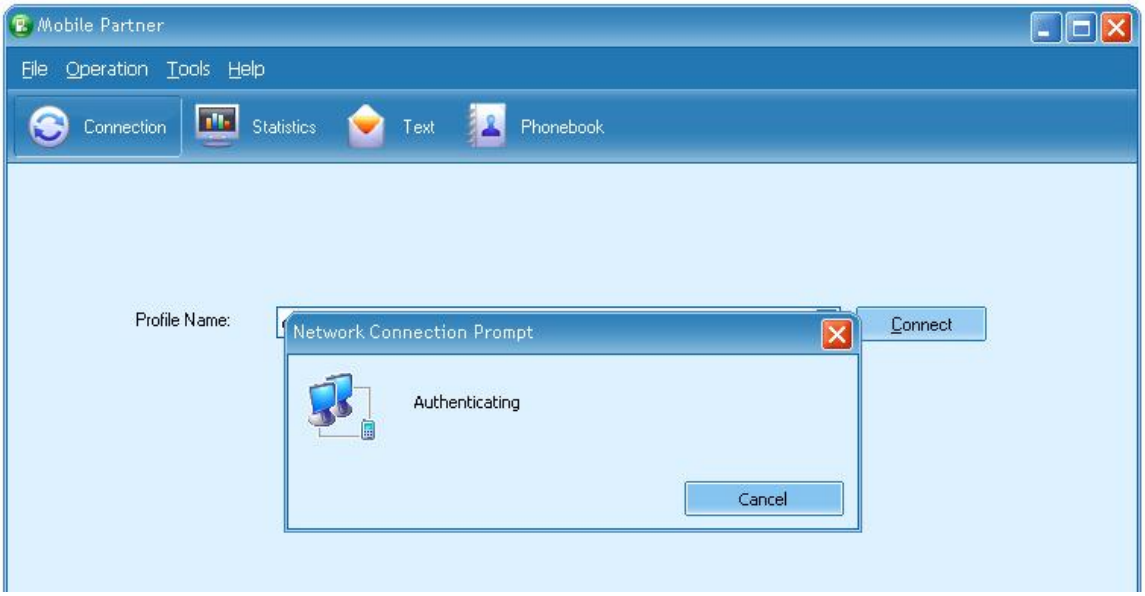
5. In the **Profile Name** box enter "ekit", select "Static" and in the **APN:** box enter "mobiledata"



6. Click on **Save**
7. Click on **Connect**



8. Wait for the software to establish your connection



9. Once you are successfully connected, you'll receive a notification in your taskbar

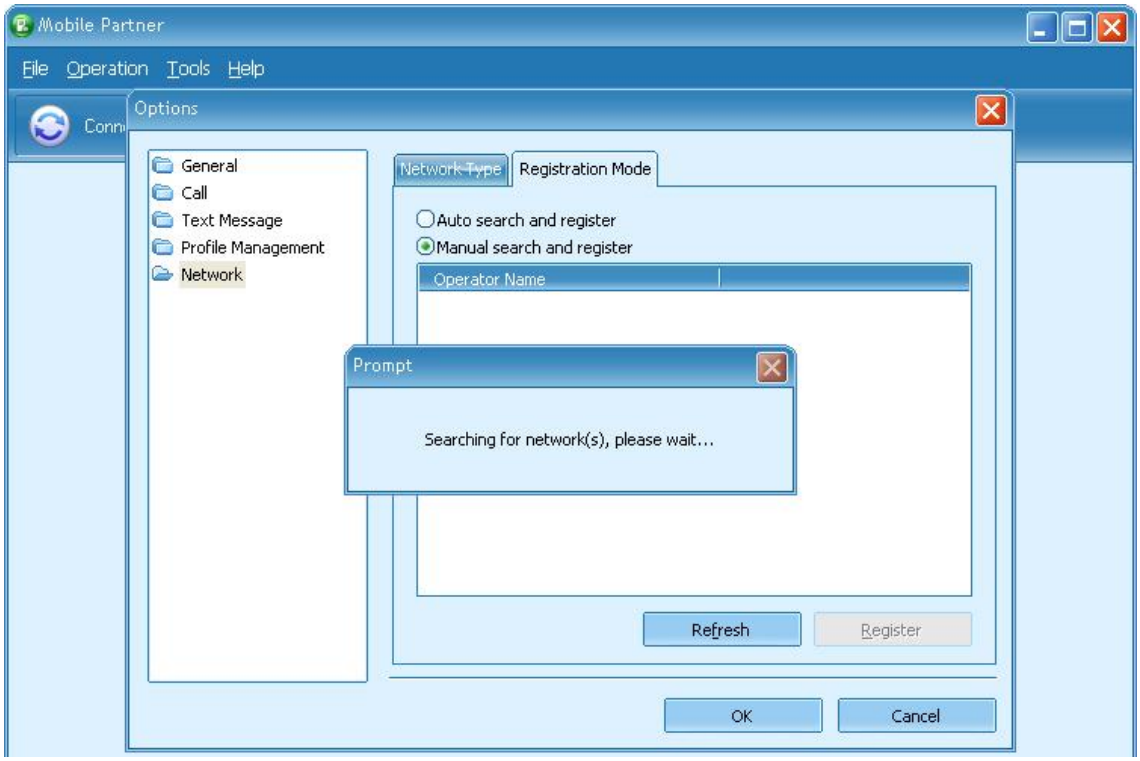
10. You are now ready to browse the web, download email, etc!

TROUBLESHOOTING

If you are experiencing difficulties with your Huawei E160 USB modem, please try the following troubleshooting steps.

Change Network

1. Locate the **Tools – Options…** menu
2. In the Options window, click on **Network**
3. Click on the **Registration Mode** tab
4. Select **Manual search and register** and then click on **Refresh**



5. Once you are shown a list of networks, select one and click on **Register**
6. Try connecting again, if you still have no success, redo steps 1 – 5 and select a different network

Reboot your computer

1. Close Mobile Partner and all other applications
2. Reboot your computer
3. Try connecting again

Try another USB port

1. Close Mobile Partner and disconnect your Huawei E160 USB modem
2. Plug it into another free USB port
3. Follow the instructions **INSTALLING YOUR USB MODEM** and **CONNECTING TO THE INTERNET** above
4. Try connecting again
